

Wouldn't it be great to finally have a US-built acoustic/electric guitar that...

- is unaffected by travel changes in temperature & humidity?
- delivers all string vibration downward onto bridge saddle?
- guarantees no more jabbed fingertips while changing strings?
- provides spot-on intonation along the entire fingerboard?
- ensures no more lost bridge pins backstage?
- sports top-grade Englemann spruce or flame maple tops?
- is available with steel or nylon strings...in your favorite gauge?
- AND produces an incredibly rich and deep acoustic guitar tone?

(Yes, it would.)

THE VIRIDIS GUITAR
"...designed for live performance"
MSRP \$3400
